iZone WiFi Connection

What you will need to operate your iZone WiFi

Smartphone, Tablet or PC

- You will need a smartphone or tablet or PC. The following platforms are supported: Apple, Android and Windows.

System Requirements

iOS SOFTWARE REQUIREMENTS

- Compatible with iPhone, iPod touch, and iPad. Requires iOS 6.0 and higher.

ANDROID SOFTWARE REQUIREMENTS

- Requires Android: 2.1 and higher.

WINDOWS PHONE REQUIREMENTS

- Compatible with Windows Phone 8 and 8.1

PC SOFTWARE REQUIREMENTS

- PC running Windows® XP SP3 or higher, Windows Vista™, Windows 7, Windows 8.
- Latest Windows service packs recommended.

WiFi modem or network switch

- You will also need a compatible WiFi modem or network switch with a spare RJ 45 access port. Some WiFi modems, firewalls and security settings are not compatible with the iZone bridge and will need to be changed or replaced to enable the iZone app to run.

Download the iZone App

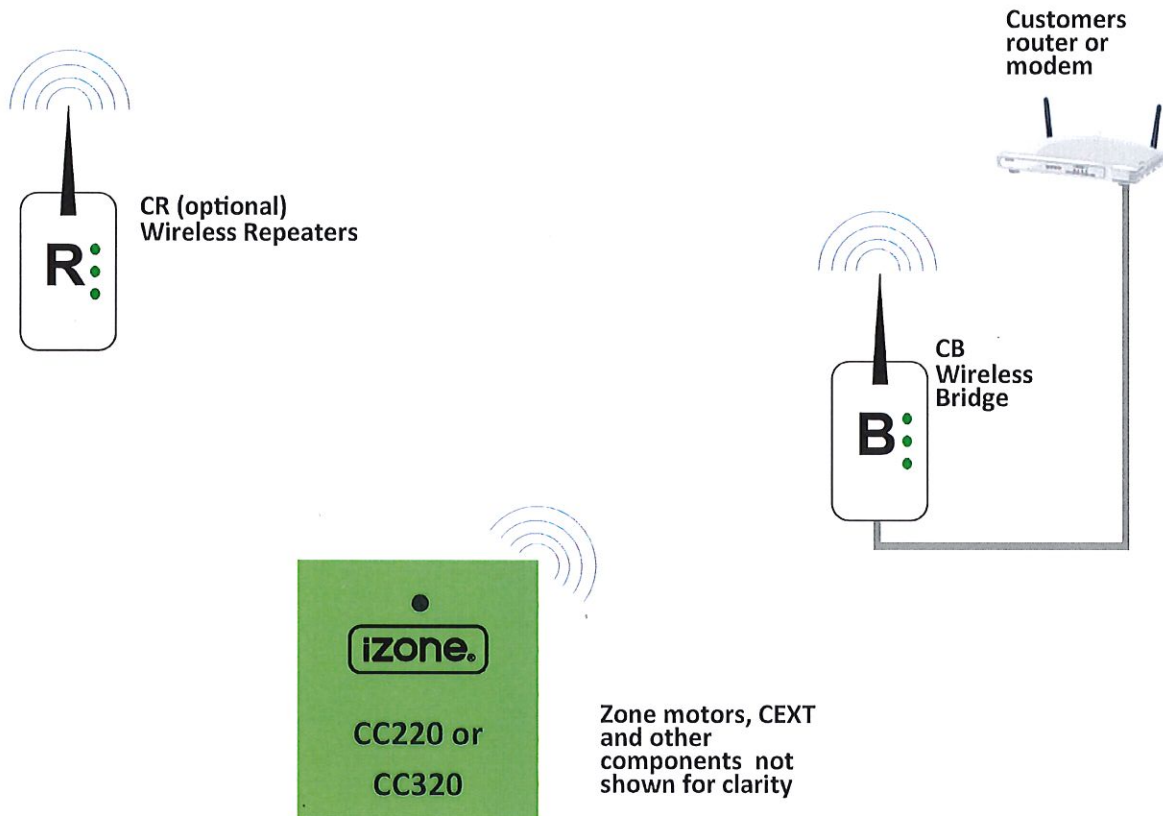

- You will need an account with the manufacturer of your phone to enable you to download Apps from their respective store.
- Apple—Apple App Store.
- Android—Google Play Store
- Windows—Microsoft Store
- Login to the respective store.
- To search for the iZone App type “iZone Controller” into the stores search menu.
- Select iZone Controller and download the iZone App.

Note: The iZone App will not run until your system is installed and the bridge is connected and running.

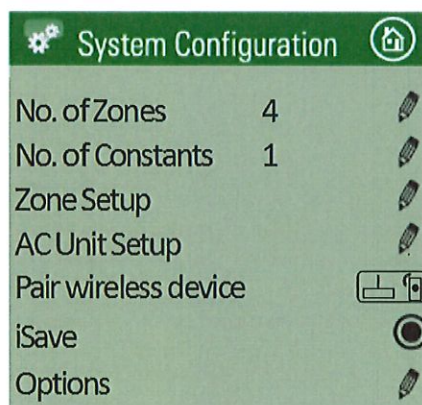

Installation

Equipment required for wireless WiFi control

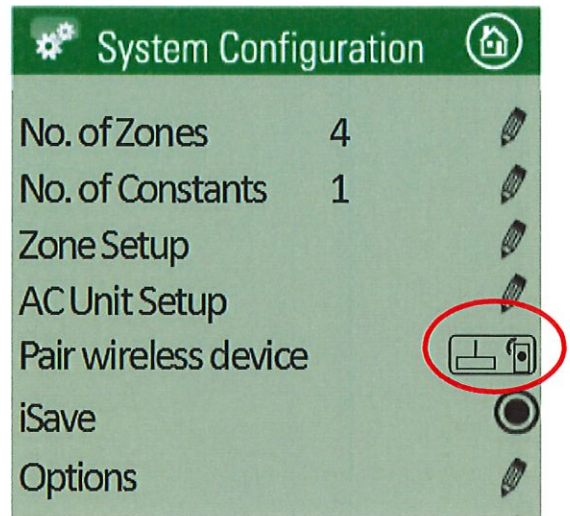

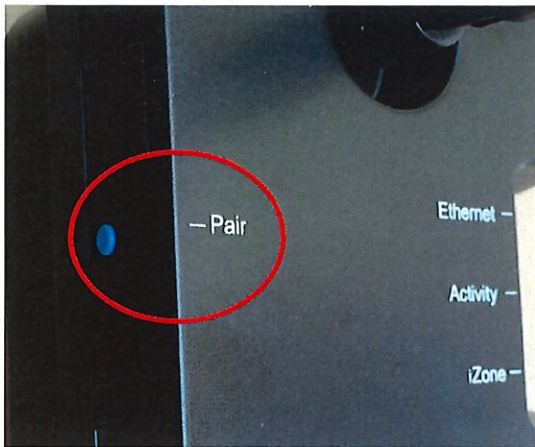

Configuration

- Power up the WiFi Bridge
- Press the System Config button on the touchscreen.
- Enter the system password "wamfud"

- Pair the WiFi Bridge to the iZone system. Press and hold the blue button on the side of the Bridge. At the same time press the "Pair Wireless Device" button on the touchscreen

- Press the home button on the touch screen.

- The WiFi symbol on the home screen should be displayed as grey

- Connect the RJ 45 cable from the Bridge to the modem / router. The symbol will change to 100% green.

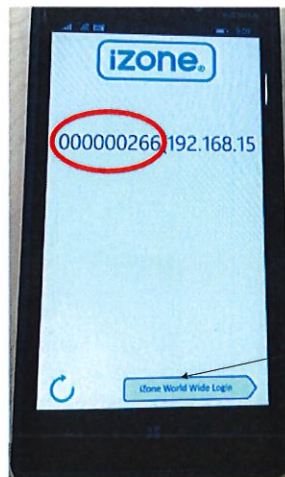

Using your iZone App in your local WiFi area

- Press the iZone button on your phone or tablet.

- A nine digit number will appear on at the top of the screen. This is you system ID number. Write it down as you will need it to register on iZone World Wide for control of your system away from home. Press on the nine digit number and you will go into the App. Now you can name your system using the "Rename" button.

Do **NOT** press the iZone World Wide button unless you are registered for iZone world wide and you are outside your local WiFi area

iZone World Wide Service

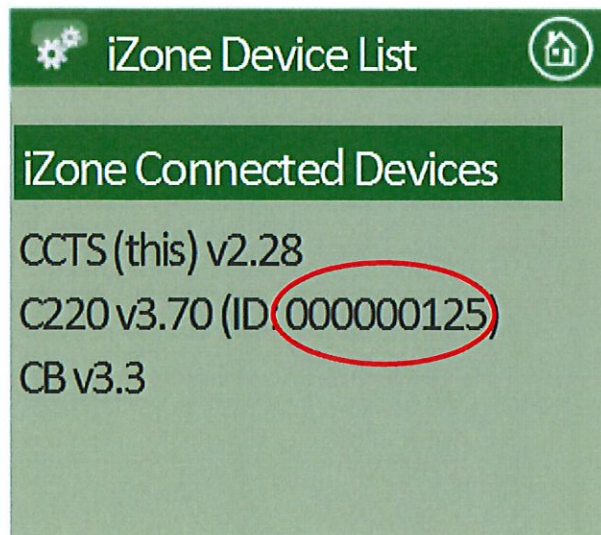

- You can only have access to the system from outside your local WiFi range after you have subscribed to iZone World Wide.
- To register on iZone World Wide Go to:

<http://www.air-stream.com.au/izone-world-wide-service.html>

- Follow the prompts to subscribe. You will need the nine digit system ID number that appears on your app. You can also find the system ID number in your configuration settings as follows:
 - Press the System Config button on the touchscreen.
 - Press iZone Device List

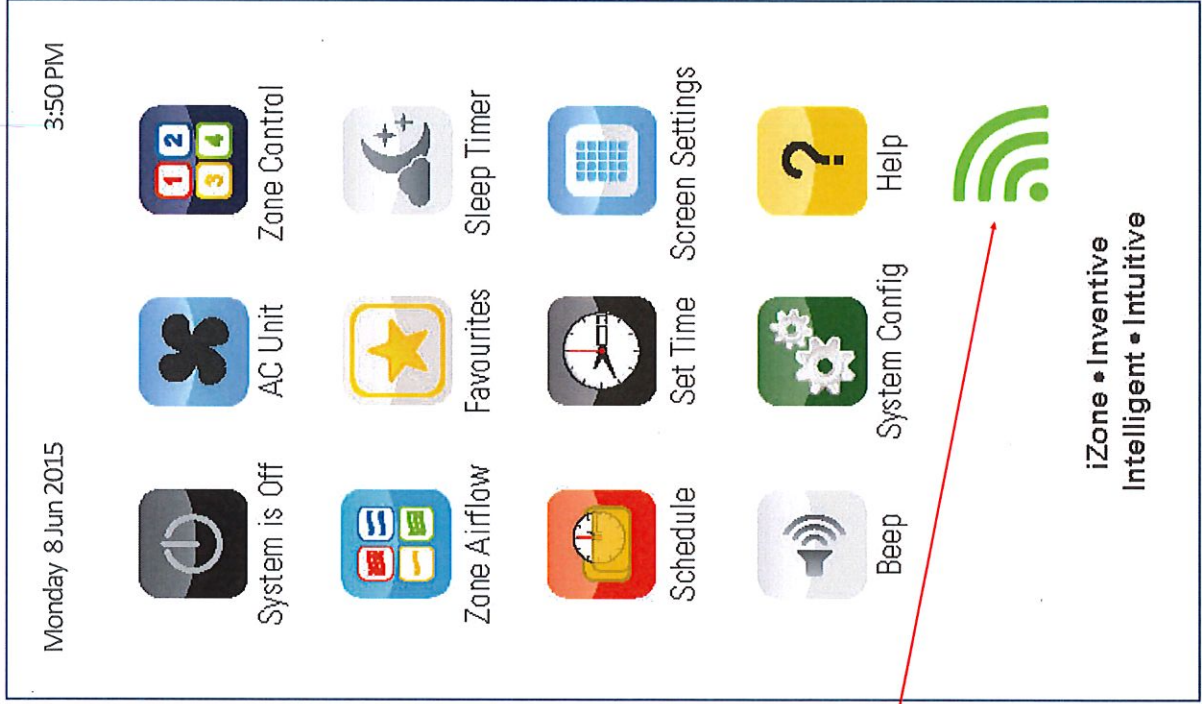

- Your system ID number is shown here

- You will also be asked for an email address and password which you should remember as you will need these to access your system when you are trying to use the App from outside the WiFi range.
- When you login in to iZone World Wide there is an option to save your username and password (Login and Remember Me). We recommend you select this option to make it faster and easier to login to your system remotely.
- To reduce the data usage there may be a slight delay between changing a setting on your phone, and the system updating, when using iZone World Wide.
- Do not use iZone World Wide when you are in your WiFi zone unless you have turned off the WiFi on your smart phone or tablet.

WiFi connection

A green symbol indicates the iZone system is now connected to WiFi and ready to use

A grey symbol indicates the Bridge is connected to the iZone system but is not connected to the local computer network
